

Environmental Science

Learn how the state of our environment impacts and influences our overall health.

Environmental Science explains how our natural environment acts and reacts and also provides suggestions on how to repair the damage that has been caused. It discusses how this damage has significantly impacted the health of living things.

This course balances the theoretical and practical aspects of environmental science, while emphasizing the relationships between a healthy environment and healthy eating.

“This course offers so many simple and practical suggestions that I can apply on a regular basis. I am now making more responsible decisions to improve and restore the environment.”

Shayleen Pierce, Registered Massage Therapist

Ideal for:

science enthusiasts focusing on health and wellness, environmentalists, health practitioners, health care providers, nutritionists, dieticians, health educators, health writers

Highlights:

- ▶ the Environmental Science certificate is a co-requisite for the Nutritional Consulting Diploma program
- ▶ only 9 months or less required to complete the course
- ▶ accredited, distance education
- ▶ includes practice quizzes, tests, feature articles from *alive* magazine, final examination, certificate, and free shipping within North America.
- ▶ *Principles of Environmental Science* by Cunningham & Cunningham textbook
- ▶ *It's Easy Being Green* by Crissy Trask book
- ▶ support and assistance while you study

Lesson 1—Understanding Our Environment

Lesson 2—Environmental Systems: Connections, Cycles, Flows, and Feedback Loops

Lesson 3—Species Populations, Interactions, and Communities

Lesson 4—Human Populations

Lesson 5—Biomes and Biodiversity

Lesson 6—Environmental Conservation: Forests, Grasslands, Parks, and Nature Preserves

Lesson 7—Food and Agriculture

Lesson 8—Environmental Health and Toxicology

Lesson 9—Air: Climate and Pollution

Lesson 10—Water: Resources and Pollution

Lesson 11—Environmental Geology and Earth Resources

Lesson 12—Energy

Lesson 13—Solid and Hazardous Waste

Lesson 14—Economics and Urbanization

Lesson 15—Environmental Policy and Sustainability
